ABCocr is a .NET Optical Character Recognition (OCR) product. You use ABCocr .NET to extract text from images.

ABCocr .NET is based around industry standard OCR software. At its heart is a custom version of the Tesseract 3 OCR engine.

The Tesseract OCR engine was originally developed by Hewlett-Packard UK. It was one of the top three engines in the 1995 UNLV Accuracy test and is probably one of the most accurate open source OCR engines available. Since then it has been extensively revised with sponsorship from Google.

Tesseract supports English, Spanish, German, French, Italian, Portuguese, Arabic, Bulgarian, Catalan, Chinese (simplified), Chinese (traditional), Croatian, Czech, Danish (Fraktur script), Danish (standard), Dutch, Finnish, Greek, Hebrew, Hungarian, Indonesian, Japanese, Korean, Latvian, Lithuanian, Norwegian, Polish, Romanian, Russian, Serbian, Slovak (Fraktur script), Slovak (standard), Slovenian, Swedish, Tagalog, Thai, Turkish, Ukrainian, and Vietnamese. Tesseract can be trained to work in other languages as well.
