Kellerman Software Code Searcher v1.18 (23 Feb 2021) Retail

2024-12-18 23:03:45

Source Code Search Tool by Kellerman Software is described to be a faster process compared to the Windows Explorer along with the agent ransack. It has the ability to search only the user source code and has the ability to use multiple processes in order to find certain files that are located on the disc. It is capable of automatically excluding the directories such as the packages, Node-modules, bower-modules, and so on. It also has the ability to exclude the minified files along which the source code searching tool which has the internal database of source code extension which is valid so that the only process of searching for the source code file take place. It permits the user and developer in order to create an index in order to perform the process of searching as the user types.

Kellerman Software Code Searcher Great Features:

It has the following features and attributes that are stated as below such as:

- It has the ability to provide the user a super-fast searching process and when the user is searching all the processes are available to be used. The Surge speed is considered to be limited only by the heart has arrived paid as well as the CPU speed. The search process can be even faster by creating an index and then performing the process of searching the index.
- When the process of indexing is going on the available processors are being used and hence the indexing has the ability to create the source code search tool which is faster than the Apache Lucene.
- The user has the ability to search by a plain text or even a Boolean expression along with a fuzzy matching and regular expression or even the entire word. Internally all the processors are considered to be used for the file matching process.
- Highlighting of the source code for the language of java, python, Visual Basic, JavaScript, Salesforce, markdown, PowerShell, XML, HTML, and a few more to be mentioned.
- It has the ability to highlight the source code as well as perform the sensitive as well as insensitive searches for the user.
- Capable of supporting the Apache NetBeans, Atom, Bluefish, eclipse, idea, Visual Studio and a few more and permit other editors to be easily added.
- It is capable of supporting the process of browsing through the folder as well as the Windows Explorer and the total commander.
- It is capable of providing the user and the developer with the lifetime technical support via email services.
- The user has the ability to purchase today and get a refund within 60 days if he is dissatisfied with the purchase.
