ZZZ Projects LinqToSql Plus (Z.LinqToSql.Plus) v4.1.0 (09 Dec 2025)

2026-01-09 12:04:26

is a powerful tool designed to extend your DataContext with high-performance bulk operations. These operations include BulkInsert, BulkUpdate, BulkDelete, BulkMerge (also known as UPSERT), and BulkSynchronize. These features allow you to manage large volumes of data efficiently, bypassing the usual overhead caused by the ChangeTracker in Entity Framework, which can slow down operations when dealing with large datasets.

With **ZZZ Projects LinqToSql Plus**, you can customize your data operations by selecting specific fields, handling primary keys, or even including child entities. This makes it ideal for scenarios where you must insert, update, or delete thousands of records simultaneously. Additionally, batch operations like DeleteFromQuery and UpdateFromQuery (coming soon) will allow you to perform these tasks directly using LINQ queries without loading entities into memory, further speeding up the process.

This tool is perfect for developers who need to optimize performance for tasks beyond standard data operations. It eliminates unnecessary database round-trips and allows you to perform data updates directly on the database, making it a must-have for projects with large datasets or complex data requirements.

Key Features of **ZZZ Projects LinqToSql Plus** :

1. Bulk Insert: Efficiently insert large amounts of data with child entities without tracking changes.
2. Bulk Update: Update specific fields of multiple records at once without loading entities into memory.
3. Bulk Delete: Remove large data sets quickly without loading entities, saving resources.
4. Bulk Merge (UPSERT): Perform an update or insert (UPSERT) operation in one go, ensuring data integrity.
5. Bulk Synchronize: Sync large datasets between two sources, either updating existing records or inserting new ones.
6. UpdateFromQuery: This method directly updates records in the database using a LINQ query, bypassing the need to load data into the context, resulting in much faster performance.
7. DeleteFromQuery (Coming Soon): Remove records directly from the database via LINQ queries without loading them
