TMS Logging v2.12.0.2 (19 Dec 2024) for Delphi XE7-12 Athens Full Source

2025-01-02 10:42:42

TMS Logging is a compact and versatile logging framework designed to simplify the generation of informative log output across diverse platforms. Offering seamless compatibility with VCL Win32/Win64 apps and FMX Win32/Win64/macOS/iOS/Android apps, this framework allows logging to various output handlers, including Console, HTML, Text file, CSV file, TCP/IP, Browser, Windows Event Log, and more. Leveraging Run-Time Type Information (RTTI), **TMS Logging** ensures comprehensive type and class logging with minimal code, while its attribute-based log output control enables precise customization.

This logging solution comes with a rich feature set, including extensive data formatting capabilities, multi-threading support for thread-safe operations, and runtime configurable log levels. The framework's persistence features allow log configuration storage to file or registry, while helper methods expedite custom output handler setup and retrieval of critical machine, device, and application information. With value validations based on attributes and the ability to log exceptions automatically, **TMS Logging** offers developers a robust and flexible solution. Its TCP/IP communication capabilities also facilitate remote logging viewing and multi-client log aggregation.

goes beyond conventional logging frameworks by providing an IDE Plugin for efficient code augmentation, making it user-friendly and adaptable. Furthermore, its interfaces with myCloudData.net and Exceptionless offer cloud-based logging options, adding a layer of accessibility and scalability to the logging process. Experience the efficiency and convenience of TMS Logging, an all-encompassing solution for your logging needs.

Key Features of **TMS Logging**:

1. Cross-Platform Compatibility
2. RTTI-Based Logging

所有软件资源 100%安全 已检测 无病毒 无篡改
