# Progress WhatsUp Gold v24.0 Build 2096

2026-08-10 13:59:23

simplifies the management of your IT infrastructure, whether in the cloud or on-premises. It gives you full visibility into your network, helping you monitor performance and identify and resolve issues quickly. With powerful out-of-the-box features and intuitive workflows, it makes managing complex environments easier, ensuring your network stays up and running smoothly.

WhatsUp Gold also provides real-time alerts and interactive maps of your network, making monitoring devices, servers, virtual machines, and applications simple. You can click on any device for instant access to reports and settings, allowing you to troubleshoot issues efficiently. Additionally, it integrates log management and security features, helping you comply with regulatory requirements while ensuring network health.

**Progress WhatsUp Gold** integrates with Flowmon for advanced traffic analysis and network security to further enhance your network management. Its REST API also allows you to automate tasks and connect with other systems, making your operations more efficient.

## Key Features of **Progress WhatsUp Gold** :

1. Network Mapping: This tool creates detailed, interactive maps of your entire network to help you visualize and manage everything from physical devices to cloud-based resources.
2. Real-Time Alerts: Customizable alerts ensure you can stay on top of network issues and maintain optimal performance.
3. Log Management: Simplifies the process of monitoring, searching, and archiving log data to meet regulatory requirements.
4. Flowmon Integration: Provides advanced network performance and security analysis, extending your network visibility.
5. REST API: Allows integration with other systems and automates network monitoring tasks, making management more efficient.
6. Application & Cloud Monitoring: Monitors the performance of applications and cloud resources like AWS and Azure.
7. Wireless & Virtual Network Monitoring: This software visualizes and ensures the performance of wireless networks and
