Lizard Labs Ultimate Dashboard Studio v2.0.0

2025-02-13 22:51:49

The simplest way to load data from SQL Database, Microsoft Excel, or CSV files and make interactive dashboards in moments without MS Office installed on your computer.

Building dashboards with the programmer is as easy as choosing the right UI component (Chart, Pivot Table, Data Card, Gauge, Map, TreeMap, or Grid) and falling table areas on corresponding discussions, worth, and string. Ultimate Dashboard Studio functions as a standalone program; Microsoft Excel setup isn't required in any way. It's built so that you can do everything within Ultimate Dashboard Studio: out of data-binding out of SQL Database, MS Excel, or text-based files to drill and filtering down.

Lizard Labs Ultimate Dashboard Studio Great Features:

- View saved dashboards interactively - data is refreshed without rebuilding dashboards.
- Can connect to various SQL data sources, including Microsoft SQL Server, SQLite, MySQL, Oracle, etc... see the entire list below
- Import data from MS Excel or text files with a custom delimiter (CSV, TSV, custom char - with or without headers, etc...)
- Import data from one or many files
- Federation Data Source will allow you to combine data from different data sources in memory and display this combined data in the dashboard elements.
- Separate dashboard layout from data. Change the data in files only and refresh dashboard with one click)
- Print and Print Preview
- Export to PDF document
- Save as images in various formats (JPG, PNG, etc...)
- Easily share exported documents on various cloud services (Google Drive, Amazon S3, DropBox, E-mail, etc...)

- Microsoft SQL Server
- MySQL
- Oracle
- IBM DB2
- Google BigQuery
- PostgreSQL
- Amazon Redshift
- Microsoft Access
- SAP Sybase Advantage
- SAP SQL Anywhere
- SAP Sybase ASE
- Firebird
- MS SQL Server CE
- Pervasive PSQL
- SQLite
- Teradata
- VistaDB

- Microsoft Excel
- Comma-Separated text files
- XML File
