FastReport for COM/ActiveX includes a full-range report designer and several examples of unique reports. FastReport COM/ActiveX is streamlined and quick, supplying high working speed with low system demands.

FastReport for COM/ActiveX (previously FastReport Studio for Developers) - coverage tool for programmers
Do you want an easy-to-use, quick, and effective reporting strategy to use on your undertaking? FastReport for COM/ActiveX includes a full-range report designer and several examples of unique reports.

Compact and quick:

- The high working speed with low system demands. FastReport Studio might be set up on older, slower PCs.
- Compact and simple to install; setup size is simply about 7Mb!

Powerful and adaptable:

- Comprises a vast selection of items used in reports (text, pictures, graphs, barcodes, etc.) and data-formatting tools - whatever is required to make professional-looking reports.
- Includes an integrated conversation designer to ask parameters before running a report. A macro-language interpreter (four languages can be found - C++Script, PascalScript, BasicScript, JScript) manages non-standard data and permits you to produce even the most complicated reports.
- Can make exceptional reports for dot-matrix printers and publish them fast, which can be essential for meeting corporate objectives.

Prohibitively costly:

- It is possible to redistribute the Basic Report Designer of FastReport Studio and your software with no extra charges. For redistributing the complete Report Designer of FastReport Studio, you (or your clients) need to purchase another FastReport Studio report designer permit.
