Why everything has to be such scary?

In this course, we'll be learning to master After Effects' core animation properties. We'll look at the transform tools and use these tools to create an animated bug that bounces around in the scene.

These tools form the backbone of all animations within After Effects. When you learn how to alter these properties, you'll have the knowledge to be able to handle larger and more complicated animations following this course.

This course is designed for those who are stepping into After Effects for the very first time. Previous experience with Adobe Creative Suite is recommended but not essential.

When you finish this course, you'll leave with a wealth of new animation skills and confidence in using Adobe After Effects and a short animation piece that you can present to your friends!

While I will provide you with tools to use I encourage you to utilize your own assets to ensure that your project is relevant in your work (or private!) practice.

This class is intended to be enjoyable, and lighthearted and remove the intimidating wall of the After Effects interface. Come along as I explain how the intimidating After Effects monster can be turned into a breeze.
