ArchitectUI Dashboard React PRO v1.6.1 Nulled

2026-08-29 15:11:20

ArchitectUI is a clean, slick dashboard UI theme/template, plus it is built for contemporary applications that ReactJS power. It features plenty of elements, widgets, and elements so that programmers do not waste time with all the visual/design parts. They place some parts together, and voila, the program looks as though an expert designer constructed it.

The React variant is constructed upon the favorite create-react-app starter kit out of Facebook. It utilizes Webpack, Yarn, and SCSS (such as modular/scalable fashions architecture). All elements are integrated perfectly, employing a typical Bootstrap 4 design manual. Fundamental elements are benefitting from ReactStrap and also have been updated to Bootstrap 4 (latest version)

ArchitectUI also comes at an HTML/jQuery variant that's NPM dependencies handled through Webpack. All fashions are compiled from SCSS stylesheet documents.

ArchitectUI will make your program look like a professional designer had created it.

We have worked a great deal in the last few months with this template to include as many features as required, and we are confident it'll be a real help for anybody who will use it.
