Ginno Legaspi review - SoundBytes Magazine:

It's no secret that cinematic/SFX music is helpful in giving ambient productions that extra edge or attraction. They can also aid in smoothing the transition of tracks transitioning from one section to the next. Many soundtracks, trailers and TV/film music producers depend on cinematic/ambient samples of high quality to help smooth the transition between sections. Distant Wave by Bluezone Corporation is geared just for this. It's an ambient library featuring 1.7 gigabytes of content that can be instantly used for a variety of music productions, whether cinematic, experimental, ambient soundtrack or game music. Around 200 ultra-, modern samples make up this library.

Within you'll find a range of inspiring sounds, including Ambience, Ambience SFX Impact and Sound FX Synth Texture Transition, and Transition Reverb. I like the sophisticated Ambience sounds as well as the cool and spacious samples in the Transitions. The quality of production in Distant Wave is amazing and a majority of the samples feature the nice shine on the high end. Overall, it's an excellent library to start with for anyone looking to add cinematic sounds to their library an innovative sample library by Bluezone Corporation.
