CPU-Z

2026-11-10 07:44:23

Validate the authenticity of your system configuration and publish it to the CPU-Z Database in a single click.

It's simple and free: hit "Validate" inside CPU-Z, then "Submit", for an instant, 100% automatic upload. You get a shareable link to your full system specs and their validated status, ideal for a new build or asking for help on enthusiast forums.

CPU-Z also reads and cross-checks every component, so the report flags inconsistent clocks, wrong settings or faulty sensor readings and helps you catch hardware problems early, before they turn into costly failures.

And it remains the world-recognized standard for certified overclocking: post a record-breaking score and your name earns its place alongside the world's best in our Hall of Fame!
