.Net   Components   Other
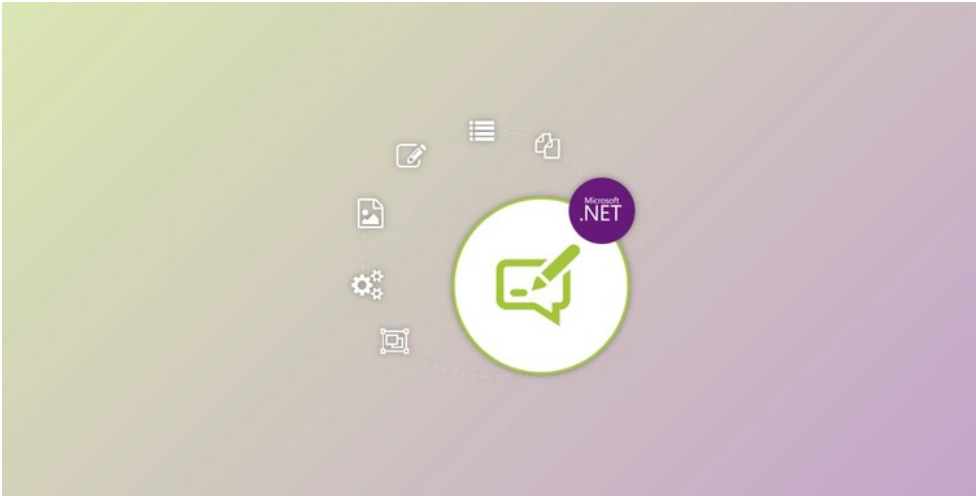

GroupDocs.Annotation for .NET is described to be a detail collection of the API which has the ability to help the user and developer in order to construct a document annotation management software in the ASP.NET along with the C# and other relevant technologies of the .NET that are available for the user. It is impossible for the user in order to create and utilize the popular and notation forms available just like place, purpose, connection, ellipse, subtract, polyline, watermark, picture, space, arrow and a few more to be mentioned for the format of PDF, HTML, spreadsheet, PowerPoint, Microsoft Office Word, photos, along with different other formats available. The annotator of the file permits the user and developer in order to export the files including The annotation, comment, or even emphasizing the notes to the original design. Additionally, it offers the users with a handy set of information where do user has the ability to personalize The annotation process following the user requirement. GroupDocs.Annotation for .NET permits the user in order to create and operate different kinds of annotation and hence it provides freedom and simplicity of the communication whenever the user is working along with the team on the job. It is possible for the user to use the annotation including The annotation of the place, stage annotation, text annotation, arrow annotation, ellipse annotation, space annotation, connect a notation, and last but not least the watermark annotation which can be inserted in the file by the user. It has the capability to provide a very comprehensive set of data object along with each property that are mainly used in the storage of the data. The user has the capability to work with the annotation, collaborator, annotation reply, document, parent annotation and a few more to be mentioned. It has the capability to offer a very easy way by which the user has the capability to manage the access directly from the annotations. The properties that the user has the ability to assign or even revoke basically include download, export, delete, and so on.

Groupdocs.Annotation for .NET Great Features:

It has the following features and attributes that are stated as below such as:

- It provides the ability to add, edit as well as remove the annotation and also replies in the storage of the data.
- The export annotation can happen from the storage of the data to the document easily.
- The metered license is provided by the Control building as well as by paying according to the usage of the API.
- Assigning the access rights of the user in order to restrict the annotation activities that take place on the document.
- Single function of the call to fetch of all the annotations of documents available.
- Assigning the value to download station point or even moving the existing pointer value for the user.
- Adding the link annotation to the format of PDF, word, as well as the PowerPoint slides.
- Setting the background color by the choice of the user of an annotation or even removing The annotation from the document can take place.
- Storage independence is present with the user data storage or even the default in our storage of the XML.
- The user has the capability to get the text coordinate as well as the text annotation in the representation of the image of a particular document.
- Getting comments by the link user to the area of annotation and also supporting the comments that are nested.
- Using the arrow annotation for the process of pointing to the particular content available.
- Using the annotation of the distance in order to draw a line that has the ability to represent a distance among the objects.
- Pointing the annotation based whenever clicking pops on the window in order to add comments.
- Creating a sequence open line segment which has been created as an annotation of Polly line.
- Creating a straight line segment, an arc segment, as well as a combination of both.
- Adding the image annotation to the format of PDF, diagram, presentation as well as images.
- Resizing the annotation by the process of assigning the new height as well as the parameters of width.
- Exporting the annotation as well as working with the files of the TIFF   is possible with the help of GroupDocs.Annotation for .NET.
- Adjusting the vertical as well as the horizontal alignment for annotation of watermark.

- And last but not least adding of the text horizontal alignment for the field of the text by the user.
