The SVGMagic the ability to add his support for the SVG as well as the animated SVG image files to the Embarcadero RAD Studio Delphi as well as the builder of C++ and the visual component library or the VCL.

Integrates with native IDE elements: Once it is installed the image of the SVG has the ability to be displayed with the use of the native component of the IDE along with all the bitmap which is based format such as the .bmp, png, jpg, and a lot more. The parts have the ability for being employed by the TGraphic service such as TImage, TPicture, TCanvas.

Superior picture quality: It is the habit to get consistently the very best quality pictures for the users and developers in all of the dimensions as well as resolution. The user does not have to edit the picture even it has to be resized.

High DPI conscious: Whenever an SVG is used in order to show a picture the quality that it has does not change even if the image is being stretched. This particular attribute has the ability to provide the user and the developer with a particular advantage once the program has the support of the large dpi as the process of resizing is accompanied by the interfaces.

Transparent: The SVGs have the ability to support transparency for the user and developers. There are no more anti-aliasing problems that can be experienced with the bitmap pictures that are centered.

Animated: The SVG has native support which is complicated animations, and the SVGMagic which has the ability to ultimately keep all of them.

More significant dimension: The SVG Billy smaller than the bitmap-based graphics even if they are compressed. The best part is that the SVG has support for compression.

Widely accessible: The SVG frequently being employed for online graphics and it is very famous and well-known and has a useful creation tool which can be found such as the Ink scape and also the Adobe Illustrator. Additionally, the user does not have to make any SVG for himself since there are a lot of vector picture libraries present online such as the SVG Pro, flat icon, and a lot more that are available.

Expandable: The SVG has their ability to readily get enlarged to different elements such as buttons, checkboxes, radio buttons, pop-up menus, and a few more.

Proven track record: The SVG magic is being utilized on the daily basis in commercial applications by the users and developers like Copy Trans.

Flexible: It has been known to be able to make everything possible for the user in order to acquire the spectacular effect like the animation, and later in order to change them entirely without any need for altering a single line of code.
