Altova Authentic Enterprise 2026 Release 2 for Win x64

2026-06-09 16:19:28

is a powerful XML content authoring tool and document editor designed for non-technical users. With Authentic enterprise forms, business users can query and create content using familiar conventions from existing business forms and office productivity applications without being exposed to the underlying XML or relational database technology. The software includes a graphical interface with various features that make editing XML data easy for non-technical users while maintaining the power and flexibility of structured content authoring.

Authentic provides real-time validation of user input, schema-based and business logic validation, and intelligent entry helper windows. It offers multi-language spell checking for over 100 languages, support for industry-standard XML templates such as DITA and DocBook, and integration with leading CMS (content management systems). **Altova Authentic Enterprise** also supports remote file access via FTP & WebDAV, SQL database support for content storage, XML Signature support, and multi-channel publishing to various output formats, including HTML, RTF, PDF, Word, and OOXML.

Altova Authentic Enterprise can be deployed to enterprise clients' desktops, providing interactive XML authoring of document content and business data collection. Data can be captured directly into SQL databases or XML documents for further processing in the organization's IT infrastructure. For XML- and SQL-focused solution developers, Authentic is an enterprise-scale forms and workflow platform, offering a comprehensive feature set and integration with other enterprise systems and resources.
