

TMS IntraWeb Component Pack Pro Script Edition v5.9.5.0 (05 Feb 2025) Full Source

2025-01-02 10:43:01

TMS IntraWeb Component Pack is a powerful set of over 70 components tailored for Delphi developers engaged in web application development using IntraWeb. With a strong emphasis on rapid application development (RAD), this component pack facilitates an intuitive and efficient development process directly within the Delphi IDE. Its seamless integration with IntraWeb empowers developers to design webpages effortlessly by placing components on a form, providing a hassle-free approach to building dynamic and feature-rich web applications.

The feature-rich component pack encompasses a diverse range of functionalities, including responsive design elements, asynchronous events, and continuous scrolling. Components like IWAdvWebGrid and IWAdvDetailWebGrid offer non-data-aware grid controls, while TTIWSmoothTimeLine and TTIWSmoothGauge provide advanced visual components such as timeline and gauge controls. In addition, the pack supports client-side list manipulation, offering tools like TTIWListOrganiser for efficient reordering of items, contributing to a responsive and interactive user experience.

Beyond these, provides a wide array of components for advanced edit controls, date and time pickers, image handling with hover effects, navigational controls, debugging tools, and HTML editors. Notably, components like TTIWHTMLLabel and TTIWHTMLCheckBox allow for HTML formatting within labels and checkboxes, enhancing the presentation layer. Overall, the **TMS IntraWeb Component Pack** is a valuable resource for Delphi developers seeking a versatile toolkit to streamline and enhance web application development with IntraWeb.

Key Features of TMS IntraWeb Component Pack :

- 1. Responsive layout design for dynamic and adaptive web applications.
- 2. Continuous scrolling for seamless navigation.
- 3. Supports both data-aware and non-data-aware controls for flexible application development.
- 4. Asynchronous event handling for responsive user interactions.

- 5. Asynchronous rendering and updating for a smoother user experience.
- 6. Responsive list with item templates and fine-grained interaction controls.
- 7. List editor for flexible editing of values with configurable hints and images.
- 8. Full asynchronous update support for efficient database navigation.
- 9. Support for additional customized buttons.
- 10. Modal dialog control with asynchronous events and updates.
- 11. Customizable input capabilities for user interactions.
- 12. Async events and updates for dynamic tree structures.
- 13. Nodes with checkboxes, radio buttons, links, hints, colors, and images.
- 14. Components like timeline, gauge, LED label, and label with gradient/texture fill for enhanced visual appeal.
- 15. TTIWListOrganiser for full client-side reordering of items in a list box.
- 16. TTIWListLink and TTIWComboListLink for client-side listbox to listbox and combobox to listbox links.
- 17. Various label components, including date label, popup menu label, and gradient label.
- 18. Static, dropdown, and popup menus with hover effects.
- 19. Non-data-aware and data-aware grid controls (IWAdvWebGrid, IWDBAdvWebGrid).
- 20. Advanced edit controls, lookup edit controls, and spin edit controls.
- 21. Calendar, date picker, date selector, month planner, and a client-side running clock.
- 22. Image components with design-time GIF & JPEG support and hover image capability.
- 23. Hover fade effect for images and client-side ImageMap support for JPEG and GIF files.
- 24. Color picker, draggable selector for colors, fonts, and images.
- 25. Help popup component with formatted text support.
- 26. Hotmail-like button with gradients and glyph support for normal, hovered, pressed states.
- 27. Outlookbar, XP style navigation bar, and navigational control similar to Microsoft Exchange web access.
- 28. HTML editors (IE, Firefox, Chrome, Opera) for versatile content creation.
- 29. Labels, radio group, checkbox, and list with HTML formatting support.
- 30. Container for client-side Javascript or CSS code (TTIWClientCode).
- 31. Component to enable client-side OutputDebugString from JavaScript (TTIWClientDebugOut).
- 32. Javascript OutputDebugString viewer for full client-side code tracing (TTIWClientWatch).
- 33. Components like credit card number and expiry date edit controls with client-side validation.
- 34. File picker with attached file picker button.
- 35. Edit control with cookie persistence.
- 36. Various comboboxes with predefined countries and states.
- 37. Multi-column combobox with lookup and type-ahead.
- 38. Checked list box, dropdown checklist group control, multicolumn radio & check groups.
- 39. HTML editors for versatile content creation with asynchronous updates.
- 40. CAPTCHA component with properties for display customization.
- 41. Expanding/collapsing panel, scrolling panel, and ticker with optional expanding/collapsing part.
